Shoaibuddin Mohammed

Overview - Handyman App

- This is an app designed so that customers can easily find, schedule, and pay handymen to complete jobs.
- Handymen can sign up and advertise their services; customers can sign up and search for handymen.
- When a customer finds a suitable handyman, the former may create a service request to the latter, containing images of the assignment, detail about the job, and availability.
- The handyman can then view the request and send a quote.
- Once the customer agrees to a quote, the appointment is scheduled; once the job is completed, payment may be completed through the app or via cash or check in person.

Actors

Primary Actors:

- Handyman - performs services
- Customer - purchases services
- Admin - oversees users and services
- External Database - stores user data
- Third Party Payment Handler - processes electronic payments

Secondary Actors

- Building Manager/Inhabitant - directs and informs handyman
- Security Guard/Clerk/Desk Attendant - directs and grants access to handyman

Functional Requirements

- **User Registration and Authentication**
 - Customers and handymen who provide the required information can create accounts.
 - Email verification for account activation should be supported by the app.
 - Users ought to be able to securely log in with their credentials.
- **Handyman Profile**
 - The ability to create and administer an account should be available to handymen.
 - The ability to list the services provided, the hourly prices, the service locations, and the availability.
 - Upload your profile photo and any necessary credentials.
- **Service Request Creation**
 - Customers can create service requests, detailing the task and, if necessary, adding images.
 - Indicate the appointment's desired time and date.
 - Choose the required service type from a list that has been predetermined.
- **Service Quotation**
 - A handyman can browse work information and images and accept service requests.
 - Based on the information given, provide a repair estimate.
 - Provide the customer with the quotation for evaluation.

More Functional Requirements

- **Appointment Management**
 - Customers can evaluate repair quotes they have received and select a handyman based on the quotes they have received.
 - Verify the service and arrange a time to meet with the chosen handyman.
 - Appointments should be confirmed and alerts sent to the handyman.
- **Payment Processing**
 - Customers should be able to safely use their credit card information to pay for the service.
 - Manage payment confirmation and offer receipts for payments.
- **Notification System**
 - Establish a system of alerts to inform users of service requests, estimates, appointment confirmations, and reminders.
- **Feedback and Ratings**
 - Encourage clients to comment and rate the work that has been done.
 - Show the average ratings given to each handyman based on client comments.

Even More Functional Requirements

- **Search and Filters**
 - Make it possible for customers to look for handymen based on the services they offer, their location, and their ratings.
 - Use filters to enhance search results.
- **Messaging System**
 - Establish a messaging system that enables handymen and clients to communicate about service specifics, appointment scheduling, etc.
- **Profile Management**
 - Users should have the opportunity to amend their profiles, change availability, and update contact information as well as service specifics.
- **Admin Dashboard**
 - Offer a dashboard for administrators to manage users, resolve conflicts, keep an eye on activity, and produce reports.
- **Appointments History**
 - Keep a record of all handymen and client appointments, including past and future appointments.
